

Criterion E: Evaluation

Success Criteria

Program should have two options on the main window: for teacher and for students;	 <p style="text-align: right;">met</p>
Teacher can create multiple choice questions in 5 subjects with 3 different point value and with correct answer that will be possible to print later	<p>Met; All created questions are saved in corresponding file, which can be printed.</p> <p>ex. Math.txt file contains:</p> <p style="text-align: center;">4 * x = 84 ; x = ? ~20~21~22~24~B~1</p>
Search, edit and delete the questions will be allowed by the program;	ListWindow shows all questions (records). Delete and Edit buttons work correctly.
The program allows xx to give the electronic version of quiz.	When writing quizzes a lot of paper is wasted. Software solves this problem.
The program allows xx in one game to create two teams with max 5 students.	 <p>Met;</p>
The program allows xx to provide as many game/competitions as she wants	Met; information about teams are saved in team.txt file
Teams choose subject and level, but questions “chooses” program from database created by the teacher.	Met; All questions, created by teacher, will be entered in one array and software chooses from it.
During the competition program will show teams their results and who is the winner	Met;

	 <p>after each question</p>  <p>Any time</p>
The program calculates and saves data of students' achievement	<p>Teacher can see the results any time. She can compare the results to see the changes in the performance of the children.</p>  <p>Results.txt</p>
The product can be shared with other teachers	<p>My client can send/give this program to other teachers, and they can use it in their studies. This idea likes my client because she thinks use the software is very easy and useful.</p>
Warning messages to teacher in case of dataentry error.	<p>If during creating questions error was made by teacher, warning message will be displayed.</p> <p>Was tested by the client and works successfully.</p> 

Recommendations for Further Development

Password for teacher's section: adding unique login and password to teacher's section, prevents students from seeing answers; to protect password information coding algorithm should be created.

Images and music: although there are questions about art and music we can improve it by adding pictures or some piece of music; showing them, students will have to identify what or whose picture or music was it.

The best student: the program could not only save the points of the team, but also the student who answered that questions and subject; this way would be easier to identify the best student in each subject.

More teams: give client ability to create more than two teams in case of parallel classes want to play (more than 10 students).

Word Count - 422
